

Family Expenses

Problem statement:

A family wants to manage their monthly expenses. In order to complete this task, the family needs an application to store, for a given month, all their expenses. Each expense will be stored in the application using the following elements: **day** (of the month in which it was made, between 1 and 30), **amount of money** (positive integer) and **expense type** (one of: **housekeeping**, **food**, **transport**, **clothing**, **internet**, **others**).

Family Expenses - Feature list:

F01 ~: **add** <sum> <category>
F02 ~: **insert** <day> <sum> <category>
F03 ~: **remove** <day>
F04 ~: **remove** <start day> to <end day>
F05 ~: **remove** <category>
F06 ~: **list**
F07 ~: **list** <category>
F08 ~: **list** <category> [<| = | >] <value>
F09 ~: **sum** <category>
F10 ~: **max** day
F11 ~: **sort** day
F12 ~: **sort** <category>
F13 ~: **filter** <category>
F14 ~: **filter** <category> [<| = | >] <value>
F15 ~: **undo**

Iteration plan

Iteration	Planned features
I1	F01 - add to the current day an expense of <sum> RON for <category>. F02 - insert to day <day> an expense of <sum> RON for <category>. F03 - remove all the expenses for day <day>. F04 - remove all the expenses between <start day> and <end day>. F05 - remove all the expenses for <category> from the current month.
I2	F06 - write the entire list of expenses. F07 - write all the expenses for <category>. F08 - writes all expenses for <category> with an amount of money > F09 - write the total expense for category <category> F10 - write the day with the maximum expenses. F11 - write the total daily expenses in ascending order by amount of money spent. F12 - write the daily expenses for category <category> in ascending order by amount of money spent.
I3	F13 - keep only expenses in category <category>. F14 - keep only expenses in category <category> with amount of money < > or = to <value> F15 - the last operation that has modified program data will be reversed. The user has to be able to undo all operations performed since program start by repeatedly calling this function.

Family Expenses

Running scenarios

11.

User	Program	Description
1	Available commands: ~: add <sum> <category> ~: insert <day> <sum> <category> ~: remove <day> ~: remove <start day> to <end day> ~: remove <category> ~: list ~: list <category> ~: list <category> [< = >] <value> ~: sum <category> ~: max <day> ~: sort <day> ~: sort <category> ~: filter <category> ~: filter <category> [< = >] <value> ~: undo To see the commands simply type "help"	This menu will appear on screen as soon as the program is executed.
2	add 10 food	Adds the value 10 to the category "food" for the current day.
3		Added successfully!
4	list	DAY 15: food 10 RON
5	remove 15	This initializes all the categories from day 15 with the value 0, in other words it removes all the expenses for that day.
6		Successfully removed!
7	list	Lists the days alongside the categories and values
8		No results!
9	insert 29 10 food	Inserts the value 10 to the category "food" for day 29.
10		Inserted successfully!
11	list	DAY 29: food 10 RON
12	remove 29 to 30	This initializes all the categories from day 1 to day 4 with the value 0, in other words it removes all the expenses for those days.
13		Successfully removed!
14	list	Lists the days alongside the categories and values
15		No results!

Family Expenses

User		Program	Description
16	remove food		This initializes all of the categories named "food" from day 1 to day 30.
17		Successfully removed!	After removal there will be a confirmation message.
18	list		Lists the days alongside the categories and values
19		No results!	Since there are no results, a message informing the user of this matter is printed.

User	Program	Description
1	<p>Available commands:</p> <p>~: add <sum> <category></p> <p>~: insert <day> <sum> <category></p> <p>~: remove <day></p> <p>~: remove <start day> to <end day></p> <p>~: remove <category></p> <p>~: list</p> <p>~: list <category></p> <p>~: list <category> [< l = l >] <value></p> <p>~: sum <category></p> <p>~: max <day></p> <p>~: sort <day></p> <p>~: sort <category></p> <p>~: filter <category></p> <p>~: filter <category> [< l = l >] <value></p> <p>~: undo</p> <p>To see the commands simply type "help"</p>	This menu will appear on screen as soon as the program is executed.
2	list	List the day alongside the categories and values.
3	<p>DAY 1</p> <p>internet 10 RON</p> <p>DAY 5</p> <p>food 20 RON</p> <p>DAY 7</p> <p>others 80 RON</p> <p>DAY 12</p> <p>food 20 RON</p> <p>DAY 13</p> <p>food 100 RON</p> <p>internet 50 RON</p> <p>others 100 RON</p> <p>DAY 14</p> <p>clothing 100 RON</p> <p>DAY 15</p> <p>housekeeping 100 RON</p> <p>DAY 16</p> <p>internet 25 RON</p> <p>DAY 17</p> <p>food 137 RON</p> <p>others 10 RON</p> <p>DAY 18</p> <p>food 30 RON</p> <p>DAY 29</p> <p>transport 100 RON</p>	Days printed in chronological order containing the categories and values that indeed have values.
4	list food	List a specific category for all of the days.
5	<p>DAY 5</p> <p>food 20 RON</p> <p>DAY 12</p> <p>food 20 RON</p> <p>DAY 13</p> <p>food 100 RON</p> <p>DAY 17</p> <p>food 137 RON</p> <p>DAY 18</p> <p>food 30 RON</p>	Days that contain the category 'food' inserted by the user printed in chronological order containing the category and value.

Family Expenses

	User	Program	Description
6	list food > 20		List the days where the value for food is greater than 20.
7		DAY 13 food 100 RON DAY 17 food 137 RON DAY 18 food 30 RON	Days that contain the category food with the value greater than 20 printed in chronological order.
8	list transport = 100		List the days where the value for transport is exactly 100.
9		DAY 29 transport 100 RON	Days that contain the category transport with the value equal to 100 printed in chronological order.
10	list food = 30		List the days where the value for food is exactly 30.
11		No results!	Since there are no "food" categories containing the value "30" the program will print the result "No results!".
12	sum food		List the sum for food throughout the whole month.
13		The sum of food is 307 RON	The program will print the expected sum.
14	max day		List the maximum value in a day.
15		The maximum expense (250 RON) occurred on day 13	The program prints the day with the most expenses.
16	sort day		List the days sorted by the sum of the values in a day.

Family Expenses

User		Program	Description
17		Sorting by day... Day 2: 0 RON Day 3: 0 RON Day 4: 0 RON Day 6: 0 RON Day 8: 0 RON Day 9: 0 RON Day 10: 0 RON Day 11: 0 RON Day 19: 0 RON Day 20: 0 RON Day 21: 0 RON Day 22: 0 RON Day 23: 0 RON Day 24: 0 RON Day 25: 0 RON Day 26: 0 RON Day 27: 0 RON Day 28: 0 RON Day 30: 0 RON Day 1: 10 RON Day 5: 20 RON Day 12: 20 RON Day 16: 25 RON Day 18: 30 RON Day 7: 80 RON Day 14: 100 RON Day 15: 100 RON Day 29: 130 RON Day 17: 147 RON Day 13: 250 RON	The program will print the sorted days in ascending order.
18	sort food		List the days sorted by the value of the "food" category in a day.

Family Expenses

User	Program	Description
19	Sorting by food... Expenses for food on day 1: 0 RON Expenses for food on day 2: 0 RON Expenses for food on day 3: 0 RON Expenses for food on day 4: 0 RON Expenses for food on day 6: 0 RON Expenses for food on day 7: 0 RON Expenses for food on day 8: 0 RON Expenses for food on day 9: 0 RON Expenses for food on day 10: 0 RON Expenses for food on day 11: 0 RON Expenses for food on day 14: 0 RON Expenses for food on day 15: 0 RON Expenses for food on day 16: 0 RON Expenses for food on day 19: 0 RON Expenses for food on day 20: 0 RON Expenses for food on day 21: 0 RON Expenses for food on day 22: 0 RON Expenses for food on day 23: 0 RON Expenses for food on day 24: 0 RON Expenses for food on day 25: 0 RON Expenses for food on day 26: 0 RON Expenses for food on day 27: 0 RON Expenses for food on day 28: 0 RON Expenses for food on day 30: 0 RON Expenses for food on day 5: 20 RON Expenses for food on day 12: 20 RON Expenses for food on day 18: 30 RON Expenses for food on day 29: 30 RON Expenses for food on day 13: 100 RON Expenses for food on day 17: 137 RON	The program will print the sorted days in ascending order by the values of the "food" category.

13.

User	Program	Description
1	<p>Available commands:</p> <p>~: add <sum> <category></p> <p>~: insert <day> <sum> <category></p> <p>~: remove <day></p> <p>~: remove <start day> to <end day></p> <p>~: remove <category></p> <p>~: list</p> <p>~: list <category></p> <p>~: list <category> [< = >] <value></p> <p>~: sum <category></p> <p>~: max <day></p> <p>~: sort <day></p> <p>~: sort <category></p> <p>~: filter <category></p> <p>~: filter <category> [< = >] <value></p> <p>~: undo</p> <p>To see the commands simply type "help"</p>	This menu will appear on screen as soon as the program is executed.
2	filter food	Filter the food, meaning this will delete every other category other than 'food'
3		Data was filtered successfully!
4	list	List the content in the files.
5		DAY 5 food 20 RON DAY 12 food 20 RON DAY 13 food 100 RON DAY 17 food 137 RON DAY 18 food 30 RON DAY 29 food 30 RON
6	filter food > 20	Filter the food with the value greater than 20, meaning that every other category than 'food' is deleted and all the food categories with the value smaller than 20
7		Data was filtered successfully!
8	list	List the content in the files.
9		DAY 13 food 100 RON DAY 17 food 137 RON DAY 18 food 30 RON DAY 29 food 30 RON
10	filter food < 101	Filter the food with the value less than 101, meaning that every other category than 'food' is deleted and all the food categories with the value higher than 101.

Family Expenses

User	Program	Description
11		Data was filtered successfully!
12	list	Confirmation message from the program.
13		List the content in the files.
14	DAY 13 food 100 RON	The content of the files, ascending by day, category and value
15	undo	This initiates the undo feature which reverses the last operation that was applied (add, insert, remove, filter).
16		Undone!
17	list	Confirmation message from the program.
18		List the content in the files.
19	DAY 13 food 100 RON DAY 18 food 30 RON DAY 29 food 30 RON	The content of the files, ascending by day, category and value
20	undo	This initiates the undo feature which reverses the last operation that was applied (add, insert, remove, filter).
21		Undone!
22	list	Confirmation message from the program.
23		List the content in the files.
24	DAY 13 food 100 RON DAY 17 food 137 RON DAY 18 food 30 RON DAY 29 food 30 RON	The content of the files, ascending by day, category and value
25	undo	This initiates the undo feature which reverses the last operation that was applied (add, insert, remove, filter).
26		Undone!
27	list	Confirmation message from the program.
28		List the content in the files.
29	DAY 5 food 20 RON DAY 12 food 20 RON DAY 13 food 100 RON DAY 17 food 137 RON DAY 18 food 30 RON DAY 29 food 30 RON	The content of the files, ascending by day, category and value
30	undo	This initiates the undo feature which reverses the last operation that was applied (add, insert, remove, filter).
31		Cannot complete operation. Nothing to undo.
32		Error message from the program.

Family Expenses

Work items

	Method name	Description
1	getCommand	This function returns the COMMAND (add, insert, ...) inserted by the user.
2	checkIntegrityOfTheFiles	The way that this program works is it hold a file for each day of the month, that is 30 files, each containing a dictionary <category> <day>. This function assures that everything is fine with the files, if one is missing or corrupt, it replaces it with a new one.
3	passSpaces	This function returns the index of the next string character other then space (' ')
4	passCommand	Just like the 'passSpaces' function, this function returns the index but of the position of the next space, thus passing a group of characters other than (' ')
5	passInput	The role of this function: returns the index of the next space and the text between the last space and the next space
6	getCategAndSum	This function is used alongside the "add" command and function, providing it with the <category>, <sum> and if there are other characters entered it will also return those remaining ones
7	getDayCategAndSum	This function is used alongside the "insert" command and function, providing it with the <day>, <category>, <sum> and if there are other characters entered it will also return those remaining ones
8	getRemainder	This function returns the remainder after the first word from a string
9	initializeDictionary	This function returns the dictionary containing the <categories> and the <values> specific to the day <day> from the text files
10	fileUpdate	This function updates the file with the name "fileName.txt" with the auxDictionary.
11	buildCategList	This function is responsible for building the list of categories in case I need a list later on
12	buildCmdList	In case the user needs help understanding how the program works, wants to know the commands By typing "help" this function builds a <list of commands>
13	removeTo	This function treats the case in which the <remove> command was entered and also containing the string " to " in it input: string - which is a part of the user input output: returns the <start day>, <end day> and if there are any other characters after the valid instruction the function returns it as well
14	removeDayOrCateg	input: string - a part of the user input output: the day or category after the <remove> command followed by the remainder in case there are any characters after the day or category
15	removeExpenses	This function removes all the expenses for day in the interval [a, b] pass in by parameters (updates the files) input: a, b - start day and end day

Family Expenses

	Method name	Description
16	removeExpensesByCategory	The function removes all the expenses for a certain category from day 1 to day 30 (updates all the files with the default dictionary) input: the category
17	printExpenses	This function iterates through all of the files and prints all the expenses if there are any in this format: DAY x internet y others z ...
18	getSum	This function returns the sum of all the values corresponding to each day's category
19	getExpensesForDay	This function returns the sum of all the expenses for this dictionary input: a dictionary containing categories and values output: the sum of all the values
20	updateMax	This is basically a "max" function used for alongside the "MAX" command.
21	maximumExpenses	This function iterates through all of the files, check the expenses and memorizes the day with the most expenses
22	sortByDayOrCateg	This function allows for the iteration from 1 to 30 For each day, the program calculates the expenses for that day and stores it into a list Or calculates the expenses for each day for a specific category This list is sorted at the end of the function and returned output: The sorted list of values.
23	deleteAllExcept	This function formats all the categories except the one that was passed through the parameter input: the category that we would like to filter. This function will filter all of the categories leaving the category from the parameters intact if and only if it the condition regarding the sign is fulfilled input: the category, sign and value.
24	userHelp	This function prints all of the commands that the user may enter.
25	add	This function treats the case in which the user has entered the "add" command.
26	insert	This function treats the case in which the user has entered the "insert" command.
27	remove	Remove all the expenses for a certain category for the whole month.
28	list	List all of the content from the data files.
29	sum	Write the total expense for a certain category.
30	max	Write the maximum expense of a day in a month.
31	sort	Sort data from the data files based on the conditions imposed by the user.
32	filter	Keep only expenses in a specific category.

Family Expenses

	Method name	Description
33	undo	This function reverses the last operation that was applied (add, insert, remove, filter).
34	main	This is the main function, the brains of the application, in which the two methods "commandBased" and "UIBased" take place.
35	initializeFile	This function initializes file 'i.txt' with the default categories and values.
36	stepCountUpdate	This function updates the undo_steps list with the most recent operation inserted by the user and at the same time the length of the list
37	test_getCategoryAndValueFromFile	Tests the "CategoryAndValueFromFile" method.
38	test_getCommand	Tests the "getCommand" method.
39	test_passSpaces	Tests the "passSpaces" method.
40	test_getText	Tests the "getText" method.
41	test_getCategAndValue	Tests the "getCategAndValue" method.
42	test_getDayCategAndValue	Tests the "getDayCategAndValue" method.
43	test_getRemainder	Tests the "getRemainder" method.
44	test_passText	Tests the "passText" method.
45	test_removeTo	Tests the "removeTo" method.
46	test_removeDayOrCateg	Tests the "removeDayOrCateg" method.
47	test_getExpensesForDay	Tests the "getExpensesForDay" method.
48	test_updateMax	Tests the "updateMax" method.
49	test_getSumForDay	Tests the "getSumForDay" method.
50	testEverything	Initializes all of the test methods.
51	commandBased	This function handles the command based program.
52	UIBased	This function handles the user interface based program.
53	UIBasedHelp	This function prints all of the available commands to the screen for the user to see.
54	UIgetCategory	This function returns a block of text from a inserted string, this block of text being the category.
55	UIgetValue	This function returns a block of text from a inserted string, this block of text being a value.
56	UIgetDayValue	This function returns a block of text from a inserted string, this block of text being the day value.
57	UIgetSymbol	This function returns a block of text from a inserted string, this block of text being the symbol.

Family Expenses

	Method name	Description
58	UIGetDay	This function returns a block of text from a inserted string, this block of text being the string 'day'.
59	UIAdd	This function is responsible for returning the value and category inserted by the user through the user interface.
60	UIInsert	This function is responsible for returning the day, value and category inserted by the user through the user interface.
61	UIRemove	This function is responsible for building the user input for the remove feature by collecting data from the user through the user interface and returning it for it to be processed.
62	UIList	This function is responsible for building the user input for the list feature by collecting data from the user through the user interface and returning it for it to be processed.
63	UISum	This function returns the command for the sum of a category for it to be processed.
64	UIMax	This function returns the command for the max feature for it to be processed.
65	UIFilter	This function is responsible for building the user input for the filter feature by collecting data from the user through the user interface and returning it for it to be processed.
66	UISort	This function is responsible for building the user input for the sort feature by collecting data from the user through the user interface and returning it for it to be processed.
67	getCategoryAndValueFromFile	<p>This function is mainly used for extracting the category and value from a line in a file and returning them</p> <p>The function also checks if all the data is valid such as if the category extracted from the file is in fact a valid category or if the value is actually a number.</p>
